

**IN THE CLAIMS:**

This listing of the claims replaces all prior versions and listings of the claims in this application.

The text of all pending claims (including any withdrawn claims) is set forth below. Canceled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with strikethrough. The status of each claim is indicated with one of (Original), (Currently amended), (Canceled), (Withdrawn), (Previously presented), (New), and (Not entered).

Please AMEND claims 1-7 and ADD new claims 8 and 9 in accordance with the following:

1. (Currently amended) A ~~data-storage-computer-readable~~ medium, comprising having recorded thereon:  
audio video (AV) data;  
a markup document which was provided to reproduce the AV data in an interactive mode;  
and  
control information which was provided to identify buffering state information of the markup document to be preloaded.
2. (Currently amended) The ~~data-storage-computer-readable~~ medium of claim 1, wherein the control information includes an application program interface (API) that generates a report signal used to identify a buffering state of the markup document.
3. (Currently amended) The ~~data-storage-computer-readable~~ medium of claim 1, wherein the control information includes an [obj].isCached(URL, resType) API that generates a report signal, where the URL is a parameter indicating a file path of the markup document and the resType is a parameter indicating an attribute of the markup document.
4. (Currently amended) The ~~data-storage-computer-readable~~ medium of claim 1, wherein the control information includes an API that returns a value of 0 in response to preloading of the markup document being successful, a value of 1 in response to the preloading

of the markup document being failed, and a value of 2 in response to the preloading of the markup document still being conducted.

5. (Currently amended) The ~~data-storage~~ computer-readable medium of claim 1, wherein the control information includes an API that generates a fetch signal used to issue a command to preload the markup document.

6. (Currently amended) The ~~data-storage~~ computer-readable medium of claim 5, wherein the API returns a response indicating whether the command to preload the markup document has been successfully transmitted using the fetch signal.

7. (Currently amended) The ~~data-storage~~ computer-readable medium of claim 1, wherein the control information includes an API that is used to determine whether preloading of the markup document is completed.

8. (New) The computer-readable medium of claim 1, wherein the AV data is AV data that was selected by a user to be viewed by the user while being reproduced in the interactive mode.

9. (New) The computer-readable medium of claim 1, wherein the interactive mode is an interactive mode that was selected by a user who will view the AV data in the interactive mode.
